Siplast Lightweight Insulating Concrete Roof Insulation Systems

LEED Design Contribution

Bulletin 5 – SRIS-0905

The United States Green Building Council (USGBC) created the LEED System to promote the design and construction of buildings that are beneficial to both the environment and building occupants. For commercial roofing and waterproofing, LEED encompasses two primary disciplines: LEED for New Construction (LEED-NC) and LEED for Existing Buildings, Upgrades, Operations and Maintenance (LEED-EB). There is a third discipline that includes commercial roofing and waterproofing, LEED for Core and Shell Development (LEED-CS). LEED-CS is not intended for projects where a traditional design team controls all aspects of building design and construction, but is applicable for building elements under the direct control of the developer/owner.

The attached chart summarizes Siplast Lightweight Insulating Concrete Roof Insulation Systems and as they apply to the LEED rating system.

Contact Siplast for more information on the role Siplast Lightweight Insulating Concrete Systems can play in projects with LEED requirements.
