

PARAFAST METAL PLATES

Commercial Product Data Sheet

Product Description and Product Uses

Parafast metal plates are made of Galvalume® coated steel. The round design provides an even distribution of loads and eliminates sharp corners that can damage the rigid insulation or membrane. The Parafast Standard Plate utilizes a tri-rib design and can be used over high compressive strength insulation and substrate panels. Parafast plates are used for fastening insulation, substrate panels, and base sheets in approved assemblies. These plates are designed to be used with Parafast Fasteners. Parafast metal plates are Factory Mutual Approved and meet the code compliance requirements for Miami-Dade County, Florida.

Product Application

See Parafast Fastener Commercial Product Data Sheets for recommendations.
