

Building Code Approvals

Model building codes set the standards relating to methods and materials used in United States building construction. In addition, model building codes conduct reviews of products to be approved for use in building construction.

The principal model building codes are the International Building Code, Florida Building Code, and Metro-Dade. Copies of existing model code approvals are available upon request.

In addition, many local and city approvals exist for Siplast Lightweight Insulating Concrete Systems. Please consult your local Siplast Representative for local, city, and state approvals.
